CHALLENGE

Non-invasive platform device with the potential to diagnose, track disease state and/or response to therapy for least two diseases in the vasculature.

One or more must be malaria, sickle cell disease, or anemia, given the high burden of disease in global health settings.

Participants present design and initial feasibility for non-invasive diagnostic platform based upon preset judging specifications.

Winners can receive additional funding and in-kind support from BMGF for technology acceleration, commercialization

Platform criteria

Concept, design and feasibility data

Plan to achieve use case (cost, time to results, portability, ease of use, lifespan)
